FEES

This fee table applies to all countries except USA and Canada. The decisive factor for the location of the company (country) is the location of the legal entity. In case your company is in the USA or Canada, the "[GLOBALG.A.P. North American System Participation Fees](#)" apply.

GLOBALG.A.P. system participation fees consist of a registration fee plus a certificate or assessment license fee and are charged by the GLOBALG.A.P. Secretariat via the certification bodies. They are described below in the following chapters for the various products offered.

6 EXPLANATIONS

Registration Fee

Registration fees apply to each individual producer and also to each producer group member.

The registration fee *for plants* is calculated based on the area registered and accepted under *first harvest for each crop*. Any area that is used more than once in an annual certificate validity (certification cycle), for the cultivation of the same product only, shall be registered as further harvest. Areas registered under *further harvest* of the same product, are not subject to additional registration fees.

Product quantity changes during the validity of a certificate may also result in changes of the registration fee.

Certificate License Fee/Assessment License Fee

The certificate/assessment license fee applies per certificate/letter of conformance issued for each standard/add-on and each certification/assessment validity (certification cycle).

The certificate/assessment license fee for producer groups “*Option 2, base level fee*” refers to each certificate or assessment of a producer group. The certificate/assessment license fee for producer groups “*Option 2, producer supplement*” refers to each individual producer group member who is included in the producer group certificate. It is an additional fee component according to the number of producer group members which the producer group shall also pay. The same applies for Option 1 individual producer multisite operation with QMS.

Aquaculture

The hatchery-related fees are flat fees calculated independently from the estimated number of produced organisms. “Seedling – juveniles” refer to: smolt, fingerling, alevin, nauplii, post-larvae, others.
